SUMMARY

Software Engineering student and Manager of Void Developers with hands-on experience developing, integrating, deploying, and troubleshooting production web applications. Experienced with Node.js, Express.js, Django integration, MongoDB, REST APIs, Linux fundamentals, authentication/authorization, Git/GitHub, and cybersecurity practices. Strong problem-solving skills developed through multi-backend projects, database integration, deployment troubleshooting, and team leadership.

EDUCATION

Bachelor of Software Engineering | University of Lay Adventists of Kigali, Rwanda

Expected Graduation: 2027

EXPERIENCE

Manager & Full-Stack Developer | Void Developers (2025 - Present)
• Lead a software development team and coordinate technical implementation, Git workflow, and project delivery.
• Develop and troubleshoot full-stack applications using Node.js, Express.js, Django, MongoDB, REST APIs, and Git.
• Lead development of a production Educational Platform integrating separate Node.js and Django backends.
• Coordinate backend integration, authentication/authorization, database connectivity, deployment, and issue resolution.

PROJECTS

Educational Platform | Void Developers

Node.js | Express.js | Django | MongoDB | REST APIs | Git/GitHub | Render

- • Led development of an educational platform using two separate backends: a Node.js/Express backend and a Django backend.
- • Integrated the Node.js application with the Django backend while maintaining communication between the two backend systems and their database resources.
- • Implemented authentication and authorization with student and lecturer roles, supporting role-based access to platform features.

• Integrated Django administration for course and database management, including course creation and management workflows.

• Developed course listing, course detail, student enrollment, and profile functionality across the platform.

- • Worked on deployment and troubleshooting of the Django backend on Render, resolving integration and connectivity issues during development.
- • Coordinated architecture and version control while working with another developer responsible for the Django backend.

Void Cast

- Node.js | Express.js | MongoDB | JavaScript | HTML | CSS
- • Developed a media-sharing platform with authentication, profile management, media uploads, and backend APIs.
- • Managed database structures and backend routing to support user-generated content and engagement features.
- • Applied authentication and security practices while troubleshooting application and database integration issues.

Social Messaging Platform (Void-Media)

Python (Flask) | MongoDB | JavaScript | HTML | CSS | Cloudinary | Render

• Built interactive frontend functionality and managed MongoDB structures for users and messaging systems.

• Applied authentication protection, organized backend routing, and deployment-oriented troubleshooting.

Amazon Clone

JavaScript | HTML | CSS

• Built a responsive e-commerce frontend with dynamic product interaction and cart management.

MINI-PROJECTS:

Credit Card Validator

Developed a credit card validation system capable of determining card validity and identifying card providers using *C*.

Message Encryption Program

Built a message encryption and decryption program using *C*.

TECHNICAL SKILLS

Languages: *JavaScript* | *Python* | *Java* | *C* | *C++* | *C#* | *SQL* | *HTML* | *CSS*

Frameworks & Technologies: *Node.js* | *Express.js* | *Django* | *Flask* | *MongoDB* | *REST APIs* | *Cloudinary* | *Render* | *Git & GitHub* | *Linux*

Skills: *Technical Troubleshooting* | *Problem Solving & Critical Thinking* | *Authentication & Authorization* | *Database Management* | *Backend Integration* | *Deployment & Debugging* | *Team Leadership*

CURRENT PROGRESS:

Harvard CS50 Introduction to Cybersecurity (In Progress)
- Linux Fundamentals
- Authentication & MFA
- Dictionary & Brute-force attacks
- Password Security
